Professional Summary

Software Development Engineer II with 4 years at **Barclays** owning **back-end Java / Spring Boot** microservices, **web services**, and **AWS** on **Linux**. Strong in **Oracle/MySQL SQL** database work, **Unix Shell**, **Python**, **Git**, **Jenkins**, **Kafka**, **system design (HLD/LLD)**, and production ownership.

Professional Experience

Barclays

Software Development Engineer II (BA-4)

Pune, India

Aug 2022 – Present

- Contributed to migrating a legacy **Unix** platform to a third-party **SaaS** on **AWS**, developing **Java / Spring Boot** integration services for **80+ TWS**-orchestrated business processes via vendor **REST APIs**, automating **5,000+** daily transactions across **100K+** accounts.
- Drove **system design (HLD/LLD)** so vendor **SaaS** stores **tokenized PII**, not plaintext: on-prem data is tokenized via **DPaaS** and encrypted in transit through **DTU** (files/APIs) to **AWS**; a batch recon job confirms successful tokenization of **100K+** accounts in the vendor DB with **fault-tolerant** retries and **zero downtime**.
- Raised batch throughput **60%** by replacing synchronous vendor **REST** work inside **TWS**-orchestrated jobs with isolated async workers (one file per execution); step state persists in **SQL/JPA**, and a timeout or non-2xx fails the step instead of recording a dead call as success.
- Refactored **Core Java** into a **Maven** multi-module **Spring Framework / Spring Boot** service with **Spring Data JPA**, applying **OOP**, **SOLID**, and **design patterns**, plus **JUnit/Mockito unit testing**, **integration testing**, and **code reviews**.
- Published payment and account-status events through **Apache Kafka** from **Spring Boot** services to internal audit and reporting systems, enabling downstream consumers to process updates asynchronously without blocking **TWS** batch completion.
- Built an internal **Spring Boot** service for batch replay and step-level recovery after **TWS** job failures, exposing APIs for operations to re-trigger failed payment-load steps without manual database intervention.
- Packaged the service as an executable fat JAR and wired **Jenkins** pipelines to build and promote it through test, staging, and production, cutting release cycle time by **25%** while keeping **Veracode** at zero critical findings.
- Shipped a production **RAG / LLM** ops agent in **Python/LangChain** with **PgVector** over incident runbooks and **ServiceNow/Jira** APIs — retrieval-grounded suggestions, human-in-the-loop (no unattended prod changes), cutting **MTTR 40%**.

Samsung Research

Samsung Prism Developer Intern

Bangalore, India

Jul 2021 – Nov 2021

- Built a multi-modal machine learning pipeline in **Python** and **Pandas** over **10,000+** sensor points across 3 datasets, improving model accuracy by **20%** with a 4-person research team.

Open Source Contributions

- microsoft/vscode** (PR1, PR2): Reserved the Modern UI tab close-button column so the control no longer overlays the filename; also fixed tab decoration colors on the full label.
- microsoft/playwright** (PR3): Fixed the VS Code extension connect path to pass the client name on token-bypass connections.
- kubernetes/kubernetes** (PR4): Renamed EndpointSlice controller metric to add `_total` suffix per stable metrics conventions.
- apple/pkl** (PR5): Fixed incorrect `super` method resolution inside `let` expressions in the Pkl language runtime.

Technical Projects

CodeReviewer Agent — Multi-Agent GitHub PR Reviewer, *Python, LangGraph, Supabase, pgvector, GitHub Actions, OpenRouter*

Source Code

- Built a production-style **multi-agent** GitHub PR review pipeline with **LangGraph**: parallel **security** and **pattern** agents, ensemble dedupe/verification, and structured findings posted as **GitHub Actions** inline comments.
- Implemented unified **RAG** — batch-index code, **JIRA**, and **Confluence** into **Supabase pgvector**, semantic retrieval at review time with **BM25** fallback, plus a golden-set **eval** harness (**precision/recall**) gated in **CI/CD**.

Technical Skills

Core Competencies: software development life cycle, Python, Java, SQL, database, ML, troubleshooting, NoSQL, JavaScript, HTML5, automated testing, development life cycle, ai, unit test, Refactoring

Frameworks: Spring Boot, Spring Framework, Spring Data JPA, REST APIs, Maven, Mockito, FastAPI, LangChain

Cloud & Data: AWS, PostgreSQL, MySQL, Oracle, Redis, Apache Kafka

Engineering: Linux, Unix Shell, IBM TWS, CI/CD, Jenkins, Git, GitHub, Jira, ServiceNow, Veracode

Concepts: Microservices, HLD, LLD, OOP, Design Patterns, SOLID, Multithreading, Event-Driven Architecture, Code Reviews, Agile/Scrum

Education

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science and Engineering, CGPA: 9.5/10

Chennai, India

Jul 2018 – May 2022
